

Exports API

Domain

The Vitruve Exports API is hosted at `https://api-exports.vitruve.fit`.

This new domain represents a significant upgrade from our previous API infrastructure, implementing RESTful design principles and industry best practices. The migration to this domain enables enhanced security, improved performance, and better scalability to support future API expansions. The new domain structure provides a more coherent and well-organized interface for integrating with Vitruve's services.

Authentication

The Vitruve Exports API uses API key authentication for all endpoints. Each request must include the `x-api-key` header with a valid API key.

- API Keys will now be generated by our different organizations and shared with you to access their data.
- Each API Key will provide organization-scoped access, limited to the specific organization that issued it.
- You will need to include the API Key as a request header (X-API-Key) for all requests to the API.

Example header:

```
x-api-key: YOUR_API_KEY
```

Replace `YOUR_API_KEY` with the actual key for each organization.

Methods

Get Organization Workouts

Retrieves completed workouts for an organization based on specified date ranges and permissions.

Endpoint

- `/vbt-workouts` GET (`https://api-exports.vitruve.com/vbt-workouts`)

Authentication

All requests must include the `x-api-key` header with a valid API key. The API key is a unique identifier provided to each organization for secure access to the API endpoints.

Query Parameters

Parameter	Type	Required	Default	Description
date	string	Yes	-	Date range filter
offset	number	No	-	Number of records to skip
limit	number	No	100	Number of records to return (max: 100)

Valid Date Range Values

- `this-week`: Current week
- `this-month`: Current month
- `this-year`: Current year
- `last-7days`: Past 7 days
- `last-30days`: Past 30 days
- `last-12months`: Past 12 months
- `all`: All time

Response

Success Response (200)

Returns an array of completed workouts.

Error Responses

Status Code	Error	Description
401	Unauthorized	Invalid API key or insufficient permissions
404	Not Found	Requested workout(s) not found
400	Invalid Limit	Limit value outside allowed range (0-100)
500	Server Error	Internal server error

Get Integration Users

Retrieves users associated with a specific organization based on the provided API key.

Endpoint

- /users GET (<https://api-exports.vitruve.com/users>)

Authentication

All requests must include the `x-api-key` header with a valid API key. The API key is a unique identifier provided to each organization for secure access to the API endpoints.

Response

Success Response (200)

Returns an array of users associated with the organization, excluding sensitive information.

Error Responses

Status Code	Error	Description
401	Unauthorized	Invalid API key or insufficient permissions
500	Server Error	Internal server error

Get Legacy IDs

Retrieves the mapping between legacy IDs and new UUIDs for users and organizations associated

with a specific integration partner.

Endpoint

- /legacy-ids GET (<https://api-exports.vitruve.com/legacy-ids>)

Authentication

All requests must include the `x-api-key` header with a valid API key. The API key is a unique identifier provided to each organization for secure access to the API endpoints.

Query Parameters

Parameter	Type	Required	Description
legacyApiKey	string	Yes	The legacy API key for authentication

Response

Success Response (200)

Returns a mapping of legacy IDs to new UUIDs for both users and organizations.

```
